SKILLS

- Python
- Django
- HTML & CSS
- JavaScript
- Selenium
- SQL
- Docker
- Git
- C

LANGUAGES

- Ukrainian (Fluent)
- English (B2)

PROFILE

I am a software engineering student and I'm looking for a job to use my skills on the real commercial projects to get my first professional experience.

I started learning programming by myself five years ago. Since then, I:

- Implemented PayPal and Stripe payment systems in one of my recent projects.
- Developed Django backend and mobile-responsive frontend for my projects.
- Used Selenium and BeautifulSoup5 libraries to create web crawlers, scrapers and test coverages.
- Learned how to collaborate with teams using Git, while completing group projects at the university.

EDUCATION

National Technical University "Kharkiv Polytechnic Institute"

2023 - PRESENT

Faculty of Computer Sciences and Software Engineering

Speciality: Software Engineering

PROJECTS

- **Django Ecommerce Site**

<https://github.com/AADmitriy/django-ecommerce-site>

Django ecommerce site with this features:

- Working paypal and stripe payment systems
- Account system
- User email verification
- Products filter
- REST API for products information
- webp django tag which converts images to webp format for optimization
- In development mode, the site automatically downloads products information from dummyjson.com if there is no data

- **Django and JS Chat Site**

https://github.com/AADmitriy/django_and_js_webchat

Chat site driven by websockets using Django channels and plain JavaScript.

Users of this site can:

- chat in real time
- see the date and time when messages were sent
- see if their messages were read
- see the count of unread messages
- see if other users are online
- react to / edit / delete messages
- create and manage groups
- search for users and groups
- join groups and start new private chats

- **Programmer Game Status Site**

https://github.com/AADmitriy/programmer_status_site

This site allows a programmer to gamify his own study process by having his own skills, stats and titles, like a game character.

Features of this site:

- Full test coverage with Selenium
- Dynamical forms implemented using Django formsets and JavaScript
- Account's system
- Mobile-friendly layout
- APIs for submitting user input that are making forms more responsive.
